

Parham Forati

Backend Developer
parhamfdev@proton.me Tehran/Iran
<https://parhamforati.com>

Summary

Self-taught backend developer with roughly three years of hands-on experience designing and shipping production-grade systems, focused on Python, FastAPI, and modern web tooling. Creator of Kavlabs, a bilingual technical blog and a full-stack learning platform with isolated, sandboxed security labs and a custom code-judging engine. Comfortable directing AI coding agents as part of a professional workflow: architecting systems, guiding implementation, and then rigorously reviewing, testing, and hardening the resulting code for security and performance. Actively studying web application and API security through independent bug bounty practice.

Projects

Kavlabs Academy

2026 – Present

- Built a full-stack education platform offering programming and security courses alongside hands-on security labs run in isolated Docker instances.
- Designed and implemented a custom code-judging engine (LeetCode-style) for automated evaluation of coding exercises.
- Built a gamification layer with an internal virtual currency and a premium subscription tier.
- Integrated object storage (S3) and third-party video infrastructure (ArvanCloud, Aparat) for scalable course content delivery.
- **Stack:** *FastAPI, PostgreSQL, Redis, Next.js, React, Docker*

Kavlabs Blog

2025 – Present

- Built a bilingual (Persian/English) technical blog with full MDX support and full-text search.
- **Stack:** *Next.js, React, Tailwind CSS*

Sec Playbook

2025 – Present

- Maintains a curated collection of AppSec and bug bounty methodology notes, personal write-ups from security challenges solved, and takeaways distilled from studying published write-ups.
- Used as an active knowledge base to continuously strengthen secure coding practices across projects.

Education

Azad University, Central Tehran

Bachelor

Molecular Biology

2024 – Present

Self-Taught

2023 – Present

Computer Science & Programming

Experience

Independent Development

Tehran

Self-Directed Projects

2024 – Present

Since 2024, have been independently designing, building, and shipping full-scale personal projects end-to-end — from architecture and backend implementation to deployment — as a continuous, self-directed path to production-level engineering experience.

Skills

Languages

Python, JavaScript, TypeScript

Backend

FastAPI, PostgreSQL, Redis, REST API design

Frontend

React, Next.js, Tailwind CSS, MDX

DevOps & Tools

Docker, Bash, Linux, Git/GitHub

Security

Web application security, API security, OWASP methodology, independent bug bounty practice

AI-Assisted Development

Agent-directed coding workflows — system architecture and technical direction, iterative agent-driven implementation, and manual review/testing for correctness, security, and performance

Languages

Farsi	English
Native	C2
